FIC NEWSLETTER

opening FIC2021. We dreamed of it, you dreamed of it....and we did it! Finally! We had been waiting for over a year and had postponed the event three times, but on

"Finally together!We dreamed of this FIC for so long" said General MWA when

2500 remotely, 500 partners and 450 speakers from 60 countries. And we met again under the sun this time - the FIC community, proud to be able to welcome back so many of you in (close to) normal conditions, happy to meet both the regulars and the newcomers. Thank you to all of those who came, to those who followed us online or remotely, to all of

for, for your trust and your loyalty on this long road towards a FIC2021 that we could not have done without you. Proof that this year's theme, which placed the event under the sign of cooperation and collaboration, was well chosen.... Read the edito

European Parliament.

The issues related to the pandemic were of course important, but the digital topic came up several times in the President's speech, who called for "the attention of leaders and a structured dialogue at the highest level..." Read the article

Common Criteria certification, French 'CSPN', qualification: Finding your way through cybersecurity assessments

It is not always easy to find one's way through the various "security

Cybersecurity Agency (ANSSI). In May 2021, the FIC Observatory brought together a few experts in the field to shed light on the

subject during a breakfast organized around the theme "Buyers and

product evaluation labels" issued by the French National

users of cybersecurity solutions: Why choose certified products? Here's a look back at these discussions...

By the editorial staff of the FIC Observatory

Read the article Supply chain: The risks of backdoors in electronic chips and circuits By the editorial staff of the FIC Observatory It is a strong trend, announced for a long time: the supply chain is

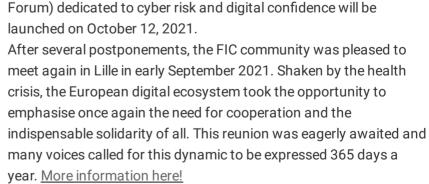

an ideal target for a cyber attacker. ENISA recently indicated that

systems of the users of these products: large companies,

attacks on the supply chain should increase fourfold between 2020 and 2021[1]. According to the European agency, 66% of these attacks would target the product code of the targeted supplier, like Solarwinds. The authors of these attacks introduce backdoors in order to be able to compromise at a later stage the information

governments, armies, operators of vital importance, etc... Read the article **SMARTDS SMARTDS SMARTDS**
